Dear Kent,

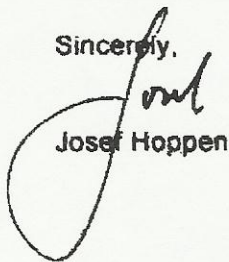

Here are some notes to confirm the modifications and parts we supplied for the Audi S4

The car go to our facility in August 1994 for sport modifications. It was a brand new vehicle at the time. We installed the stage 3 engine modification, consisting of Sport Exhaust manifold of the RS2, KKK Sport Turbo, Sport EPROM, Performance plugs and filter and an ABT Sport rear muffler. In addition, we installed Bilstein Sport suspension-springs and shocks- 8" x 17" wheels and Pagid brake pads, front and rear. Shortly thereafter we provided a 6 speed transmission and shift knob.

In April of 1996 the engine was updated to stage 4, namely modifying cylinder head and pistons by Lehmann Engineering in Lichtenstein. During the ownership of the S4 by Martin Carver, the car was very well maintained, driven and serviced in Iowa.

We enclose several copies of Invoices for your files. Please let us know if you need additional information.

Sincerely,

Josef Hoppen
